total length of streets

48.9% of subdivision, have total length less than 2000

Between 2000 and 4000 the proportion is 36.7%

The histogram is skewed to the right.

## Section 1.3

34. a. For urban homes  $\bar{x} = 21.55$  EU/mg, for farm houses,  $\bar{x} = 8.56$  EU/mg. The average concentration in urban homes is more than double the average the concentration in farm house.

b. For urban homes,  $\tilde{x} = 17.00$  EU/mg, for farm houses  $\tilde{x} = 8.90$  EU/mg. The median concentration in urban homes is almost double the median concentration in farm homes. The mean and the median for urban houses are very different because of the extreme values.

c. Urban houses: trimmed mean = 17 EU/mg  
the percentage is 9.1%.

The trimmed mean is less than the mean of the sample because of the extreme values. The trimmed mean and the median are the same.

Farm houses: Trimmed mean = 8.24 EU/mg

The trimmed percentage is 6.7%

The trimmed mean is very close to the mean and median.

40. Sample median = 92

25% trimmed mean = 95.38

10% trimmed mean = 102.23

Sample mean = 114.26
