

x2: Binary search tree in alphabetical order:

Ex. 24: Huffman coding:

So the average number of bit

$$L = 2 \times 0.30 + 2 \times 0.25 + 3 \times 0.15 + 3 \times 0.10 + 3 \times 0.08 + 4 \times 0.07 + 4 \times 0.05$$
 Step 6: $= 2.57$

Section 11.3

Ex.8 Preorder: $abdei j m n o c f g h k l p$

Ex.12. Inorder: ~~kelmbfgrnsgaohdiipjq~~
kelmbfgrnsgaohdiipjq

Ex.14. Postorder: $dimno j e b f g k p l h c a$

Section 11.4

Ex.14:

$a \rightarrow b \rightarrow c \rightarrow h \rightarrow g \rightarrow l$

back to h: $h \rightarrow i \rightarrow d \rightarrow e \rightarrow f \rightarrow k \rightarrow j \rightarrow n$

back to i: $i \rightarrow m$

then all the vertex has been found

Ex.16: $\{a, b\}, \{a, g\} \rightarrow \{g, h\}, \{g, l\} \rightarrow \{h, m\}, \{h, i\} \rightarrow \{i, d\}, \{i, e\}, \{i, r\}$
 $\rightarrow \{e, f\}, \{j, k\}$

Section 11.5

Ex.2:

first edge $\{a, b\}$, then $\{b, e\}$, then $\{e, d\}$

finally $\{d, c\}$, total weight is $1+3+2+1=6$

Ex.6: First step: $\{a, b\}$ and $\{c, d\}$ whose weight is 1
then: $\{a, e\}, \{e, d\}$ whose weight is 2
so total weight is $1+1+2+2=6$
